

Solano County Department of Environmental Management
Environmental Health Services Division

Hazardous Materials

Hazardous Materials

Presented by Mr. Brad Nicolet, Senior Environmental Health Specialist

Introduction

Regulatory Authority:

- California Health and Safety Code (HSC)
- California Code of Regulations (CCR) Title 19, 22, 23, 27
- Uniform Fire Code Article 80 (Business Plans & Inventories only)

What We Do: Six Programs

- Hazardous Materials Mgmt Article 1 CHS Ch. 6.95
 - Plan and Disclosure
 - Underground Storage Tanks CHS Ch. 6.7
 - Hazardous Waste CHS Ch. 6.5
 - Risk Management Program CHS Ch. 6.95
Article 2
 - Aboveground Storage Tanks CHS Ch. 6.67
 - Business Plan & Inventories UFC Article 80

In Addition:

Emergency Response:

Unk. Substance, derail, spills, NIHIT, etc.

Complaints:

Residential business/hobbyist, sick
Bldg

Prop 65 Reports:

Spills, releases, tank leaks

Catch-All:

Shell tanker spill, SP derail, Elmira
Pipeline Leak. Contract with FF/SS
Sewer District.

Certified Unified Program Agency “CUPA”

- Implemented in 1996.
- Intent: Reduce the burden on business by eliminating multiple inspections and fees.
- Consolidate six separate programs into single inspection, permit and fee.
- Applies to incorporated and unincorporated areas.

Hazardous Materials Release Response Plan and Inventory

- “Community Right to Know”
- HMMP Applies to “business” only
- Threshold limits:
55 gallons, 500, pounds, 200 cu/ft
- Chemical Inventory, Spill/Fire Response and notification,
Site Map
- Hazardous Materials Communication Labeling, MSDS,
Training

24 10:20AM

24 10:22AM

Underground Storage Tanks (UST)

- Purpose is to protect groundwater from contamination through prevention using secondary containment and continuous monitoring systems / equipment.
 1. Installation of UST's including plan checks and construction inspections
 2. Annual inspections
 3. Tank Removal inspections

UST Common Violations:

- No leak monitoring / broken equipment
- No annual certification of monitoring equipment
- Failure to follow permit conditions
- No approved UST monitoring/response plan
- No proof of financial responsibility

UST Excavation

UST Removal

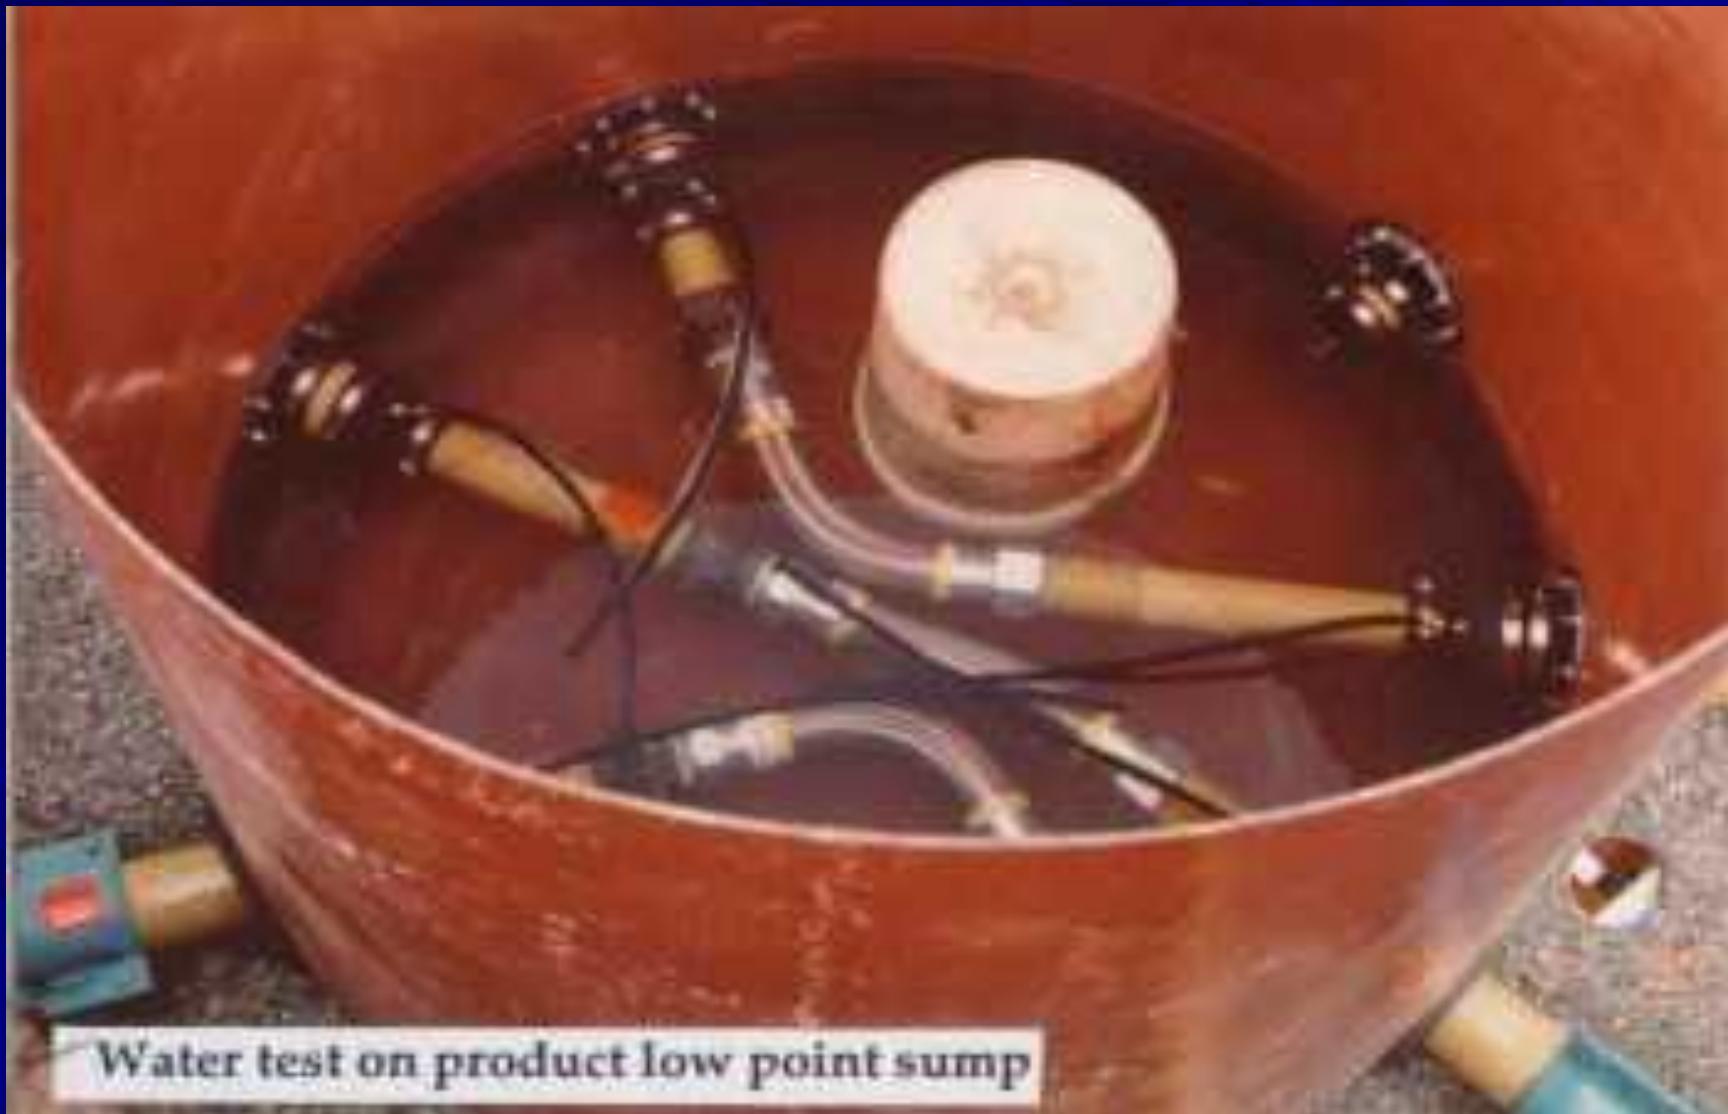

UST Installations

Who said tank installations aren't orderly?

Integrity Test

Water test on product low point sump

Equipment Checks

or pot detail without probe

Under Dispenser Containment

Construction Inspection

Double-walled product lines;
single-walled vapor return lines

Waste vs. Hazardous Waste

- These rules apply to everyone!
- Hazardous Waste determination
- EPA ID Numbers
- Labeling
- Chemical Incompatibility Issues
- Facility Design Specifications
- Management: manifests, receipts, training
- Risk Communication: alarms, spill kit

Common Violations

- Labeling, labeling, labeling
- Containers not closed or secured
- Waste manifests not available
- No waste determination / illegal disposal
- No weekly or daily inspections
- Contingency/Emergency Response Plans and employee training inadequate

Upper left shows proper label of back flush and boiler blow down drum. Remaining photos show inadequate labeling of heat transfer oil tank, wastewater tank (WW1) and alkyd/resin product drums.

Risk Management Prevention Program (RMP)

- Acutely hazardous materials that exceed thresholds listed on three tables.
- Ex. Chlorine, Anhydrous Ammonia
- Review potential for offsite consequences of airborne release
- Up to one year to three years to complete

Risk Management Prevention Program (RMP) cont'n

- Uses a professional team of experts to review processes, equipment, and training
- Assess worst case and reasonable loss condition from accident, earthquake, sabotage, etc.
- Subjected to third party review
- Public Participation Period (45 days)

Emergency Response

- Technical assistance to other agencies such as, fire, police, and public works
- Activate “toxics” superfund cleanup for hazardous waste and illegal drug labs.
- Hazcat contract for emergency Hazardous Materials Identification
- Prop 65 notification

Additional Areas: Complaints

- Complaints of possible HAZMAT violations are reviewed ASAP. Typical examples and response:
 1. Disposal of Household Hazardous Wastes
 2. Neighbor violations: illegal disposal of waste oil or antifreeze
 3. Odors and Sick Building

Aboveground Storage Tanks (AST's) and Article 80, Uniform Fire Code

- Petroleum threat to navigable waters (AST)
- Spill Prevention and countermeasure and control plans (SPCC) (AST)
- Article 80 Section 8001.3 duplicates HMBP in the Fire Code and calls the document HMMP
